Squance 3, Application US/09855341

Patent No. US20020002715A1

GENERAL INFORMATION:

APPLICANT: VIITABEN, PAUL V.

APPLICANT: VAN DYK, DREW

TITLE OF INVENTION: HIGH LEVEL PRODUCTION OF P-HYDROXYBENZOIC ACID

TITLE OF INVENTION: IN GREEN PLANTS

TITLE OF INVENTION: UNMBER: US/09/855,341

CURRENT PELLIGATION NUMBER: US/09/855,341

CURRENT PILLING DATE: 2001-05-15

NUMBER OF SEQ ID NOS: 16

SOFTWARE: MICROSOFT OFFICE 97

SEQ ID NO 3

LENGTH: 495
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MetSerHisProAlaLeuThrGlnLeuArgAlaLeuArgTyrCysLysGluIleProAla

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

California Pristionchus pacificus genomic, genomic
            insertions in Mu inactive lines were extracted from the UniformMu maize population by the thermo assymmetric interlaced PCR (TAIL) protocol using primers specific for the Mu terminal inverted repeat and a set of 16 arbitrary primers. Amplicons were size enriched using Sepharose 400 spin columns and cloned into the TOPO PCR4 vector."

Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKF2); Email s.wiemann@dkfz-heidelberg.de;
sequenced by Agowa (Berlin/Germany) within the cDNA sequencing
consortium of the German Genome Project.
This clone (DKF20458N063) is available at the RZDD Deutsches
Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany.
Please contact RZPD for ordering:
http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZp459N063;
Further information about the clone and the sequencing project is available at http://mibs.gff.de/projects/cdna/.

Transgenic plants with increased content of resistance factor - contg. bacterial DNA coding for enzyme catalysing prodn. of resistance factor, . e.g. antiviral p-hydroxy-benzoic acid.
                                                                                                                                                                                                          Transgenic plants containing a bacterial gene which encodes an enzyme able to catalyse prodn. of an antiviral, bactericidal, fungicidal or insecticidal factor are new. A preferred gene is ubic from E.coli (AA92409) which codes for chorismate-pyruvate lyase (AAR7442). The lyase catalyses conversion of chorismate to p-hydroxybenzoic acid and transgenic tobacco plants which express the active enzyme are resistant
                                                                                                                                                                  Claim 3; Page 5; 7pp; German.
                                                                                                                                                                                                                                                                                                                                         to tobacco mosaic virus
                                         P-PSDB; AAR74742.

Producing para-hydroxy benzoic acid in green plant, comprises expression of unique expression cassette containing gene encoding chorismate pyruvate lyase operably linked to specific chloroplast targeting sequence.

Claim 4; Page 55; 60pp; English

The present sequence is that of the coding region of the Escherichia coll strain W310 ubiC gene in expression construct pBT24a. The gene encodes chorismate pyruvate 1yase (CPL, see AAM50968). It was obtained by PCR amplification of strain W310 genomic DNA using primers (see ABA91839-40) based on the published B. coll ubiC gene. The CPL open reading frame is used in an expression of seet the high-level production of p-hydroxybenzoic acid (pHBA) in green plants. The expression cassette comprises the CPL coding sequence operably linked to a promoter capable of driving protein expression in higher plants. The cassette also has a sequence encoding a chloroplast transit peptide, its natural cleavage site, and a small portion of a transit peptide, its natural cleavage site, and a small portion of a transit peptide, into the organelle. The cleavage site is unique to the transit peptide, and cleavage of the cleavage site is unique to the transit peptide, and cleavage of the cleavage site is unique to the transit peptide, and cleavage of the cleavage site is unique to the transit peptide, and cleavage of the colypeptide that has full enzyme activity, comprising the mature CPL certain comprising the CPL expression cassette is claimed, and may be contracted that comprising the CPL expression cassette is claimed, and may be soybean, rapesed, sunflower, cotton, corn, tobacco, alfalfa, wheat, barley, oats, sorghum rice, Arabidopsis, sugarbeet, sugarcane, canola, millet, bean, pea, rye, flax or a forage grass, phBA is a monomeric component of liquid crystal polymers which have application in the automotive, electrical and other industries
